Anchor Chart: Texture

Texture Anchor Chart

Texture is how an object feels, or looks like it would feel.
Texture can bring interest to a work of art.

Actual texture

Actual texture is how something feels

In three-dimensional art, texture is the way something feels.

Implied texture

Implied texture is texture that you can see, but cannot touch; a surface that looks like it has texture.

In two-dimensional art, line, shape, and value help imply the way an object feels.

Artists use different techniques to create the illusion of texture in two-dimensional art.

Smooth

Use even shading and value

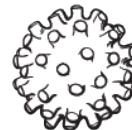

Hairy

Overlap lines and wrap them along the contour of the object

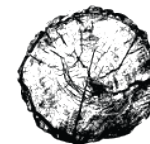

Soft

Use even shading and curved lines

Bumpy

Use rounded lines inside and around the edge of an object

Rough

Use a mixture of dots and short lines

Sharp

Use jagged, pointy lines and shapes
